

## Mmamethlake Hospital

Mmamethlake Hospital is a small hospital relatively close to Hammanskraal and Bela-bela in Gauteng. It has a fully equipped basic Audiology Department (booth, diagnostic audiometer, tympanometer, OAE screener, retubing equipment and a wax removal kit). Over the past couple of years the Witbank Hospital Community Outreach Team has rendered Speech Therapy services at the hospital as well as Audiological services during the times that an Audiologist was not available. Difficult to test patients are usually referred to Witbank Hospital for electrophysiological tests or VRA. The allied team works well together and often cross-refer patients as well as go on Community Outreach missions together.
