

Lenasia PHC is situated
85km from Pretoria and
35km from Johannesburg.

Lenasia Clinic

The catchment areas that services are provided to include: Lenasia, Zakariyya Park, Eldorado Park, Klipspruit, Eikenhof, Lawley Extension and Lahae.

Rehabilitation services includes: Occupational Therapy, Physiotherapy, Speech Therapy and Audiology.

The rehab department is located in a separate section of the clinic. There are 4 rooms allocated to the different therapists. There is physiotherapy equipment as well as a gym area. Speech therapy and Audiology equipment includes a screening audiometer, otoscopes, noise-makers, an OAE screener, a variety of toys, puzzles and books.

A wide range of patients with different conditions are seen on a daily basis. Therapists work independently and this contributes to the development of good management skills as well as improvement of assessment and treatment techniques. Therapists don't spend all of their time in the clinic: outreach is done regularly at other health service providers in the catchment areas, as well as home visits for patients in the community. Campaigns and health promotion activities play an important role in maintaining and advertising rehab services.

The stroke and CP groups are seen in a multidisciplinary team. Long term treatment is offered unlike most hospitals where patients are discharged without continuity of treatment.

The best part of working at the Clinic is the improvement that you see in your clients...!
