

# Steve Biko Academic Hospital

The hospital is located in the central business district in Pretoria and can be found in the northbound part of Voortrekker Road.

*Each day brings new opportunities and experiences!*

The Department of Speech Therapy and Audiology offers a comprehensive range of services in both disciplines. The speech and language therapy includes care from neonatal intervention, to remediation for patients with neurological disorders as well as Head and Neck cancer. The Department offers fluorography examinations of swallowing disorders for both the paediatric and adult population. In Audiology most services are available, with hearing testing, hearing aid assessments and aural education included. The Department also is involved with the hospital's own cochlear implant program.

The work situation is very stimulating, and interaction with many other allied and medical specialities takes place. Student supervision is also very satisfying. The staff in the department work closely and in harmony with one another.
